

## Experiment 5

**Student Name: Deepanshu Mandhyan**

**Branch: BE CSE**

**Semester: 6<sup>th</sup>**

**Subject Name: Full Stack Development-II**

**UID: 23BCS12327**

**Section/Group: 23BCSKRG\_3A**

**Date of Performance: 17/01/26**

**Subject Code: 23CSH-309**

### **1. Aim:**

To verify the correctness and reliability of the EcoTrack React application by writing automated tests using Jest and React Testing Library, and by analyzing application behavior using debugging tools.

### **2. Objective:**

- Understand the purpose of automated testing in frontend applications
- Write unit tests for JavaScript utility functions using Jest
- Use different Jest matchers to validate expected outputs and behaviors
- Test React components using React Testing Library
- Verify UI rendering by querying elements from the DOM
- Implement asynchronous testing using `findBy` and `waitFor` methods
- Apply mocking to simulate API or external data responses in tests
- Perform snapshot testing to detect unintended UI changes
- Debug failing tests and application logic using browser Developer Tools and breakpoints
- Analyze application behavior and errors systematically rather than manual checking

### **3. Implementation/Code:**

- The EcoTrack application is tested to ensure correctness of both logic and UI behavior.
- Unit testing is performed on utility functions (e.g., calculator function) using Jest.
- React Testing Library is used to render components and verify UI structure.
- Snapshot testing is applied to detect unintended UI changes over time.

```
src > components > JS Tracker.test.js > ...
1  // import { render, screen } from "@testing-library/react";
2  // import Tracker from "../Tracker";
3
4  // test("loads async data", async () => {
5  //   render(<Tracker />);
6
7  //   const text = await screen.findByText(/Eco data loaded/i, {}, { timeout: 3000 });
8
9  //   expect(text).toBeInTheDocument();
10 // });
11
12 import { render } from "@testing-library/react";
13 import Tracker from "../Tracker";
14
15 test("matches snapshot", () => {
16   const { asFragment } = render(<Tracker />);
17   expect(asFragment()).toMatchSnapshot();
18 });
```

#### 4. Output:

- All Jest test cases executed successfully
- Utility function test passed
- React component snapshot test passed
- No unintended UI changes detected
- EcoTrack component rendered correctly during testing
- Debugging tools confirmed correct state updates and DOM rendering

## 5. Learning Outcome:

- Importance of automated testing in frontend applications
- Writing unit tests using Jest framework
- Using matchers like `toBe()` and `toMatchSnapshot()`
- Testing React components with React Testing Library
- Validating UI rendering through DOM queries
- Understanding snapshot testing for UI stability
- Debugging React applications using DevTools and breakpoints
- Improving software reliability and maintainability through testing
